

Dear Parents and Guardians,

A change in the law requires schools and child care programs to share their immunization rates with parents. Senate Bill 895 was passed in 2015. We aim for at least 95% of children to be immunized for community protections, though the percentage varies by disease. When 95% of children are vaccinated in a school or child care, this reduces the chance of spreading the disease among vulnerable individuals. Vaccines are not 100% effective for every child. The chance of your child being exposed to a vaccine-preventable disease increases if some of their classmates have not been vaccinated. The best defense is not to be exposed to the disease in the first place, the second best defense is to be vaccinated. The rate for Hepatitis A vaccine may be different than from other vaccines because this vaccine is required for different grades. In school year 2015-2016, students in K-7 were required to receive this vaccine. One additional grade will be required to have the Hepatitis A vaccine each school year.
